

Preface

This science meeting was held in accordance with the initiation of Nobeyama Radioheliograph construction in fiscal years 1990 and 1991. The project of Nobeyama Radioheliograph was unanimously supported by Japanese astronomy community and in particular by Nobeyama Radio Observatory. Taking this opportunity of Nobeyama Symposium, I hope all of participants of this meeting to make efforts to reinforce our support to that of world-wide solar physics community. I have heard from some scientists about good impression of the meeting, that it was successful and enjoyable, and so I believe you are now eligible to publicize how Nobeyama Radioheliograph is effective to those scientists who were unable to be present at Nobeyama meeting.

I am confident that we will meet again within a few years to enjoy scientific discussions on the basis of Radioheliograph data and other sources of data to achieve scientific objectives and goals raised in this meeting.

Finally we would like express our sincere gratitude to International Communication Fund and Nippon Electric Company for financial support for travel expenditure of foreign participants and for other expenses for smooth run of the meeting.

Masaki Morimoto
Chairman of Nobeyama Radio Observatory

December, 1990
